

W2D2 Memo 1

24 September 2019

Hello all,

Welcome to our first official Memo for World Wide Data Day 2019. We've made real progress with 20 institutions signed on so far (and more expected). Please let your colleagues know about W2D2 – maybe they can join with their classes.

Here's the news:

- The [W2D2 introductory slides](#) have been revised to reflect the ideas that students are calibrating the detectors and testing the simple model of a proton-proton collision. We still have time before you need to present it, so send your suggestions for further revisions.
- The [2019 results spreadsheet](#) is now ready. Please use after you have read instructions and after your students have completed their analysis and tally sheets. Remember, one line represents results for a whole class, not for individuals.
- We still need moderators. Let your favorite particle physicist know!

Next week we will talk about Vidyo tests (highly recommended) and publicizing your event, among other things. Send in your questions and we will see if we can use them, along with the replies, in the Memo.

This and all W2D2 memos will be posted on the website at <http://tiny.cc/w2d2>.

Thanks and all the best,

Ken
