

W2D2 Memo 4

14 October 2019

Hello all,

Let's get right to the news:

- Some users have reported trouble connecting to HYPATIA-W2D2. The problem has been setting the proper domain. It seems to be fine now. If you have a problem connecting from the ATLAS W2D2 page, try refreshing it and choosing the “alternative domain link”, which happens to be https://hypatia-app.iasa.gr/Hypatia_Vaadin-1.0/?layout=w2d2.
- Still need a Vidyo test? Make-up Vidyo tests are available for a limited time tomorrow with QuarkNet staff member Shane Wood, Tue 15 Oct, 18:00-20:00 UTC.
- Whether doing a Vidyo test or connecting on the big day, please connect to Vidyo on the World Wide Data Day Indico page at <https://indico.cern.ch/event/854311/>.

The just-about-final schedule of World Wide Data Day videoconferences can be found on the videocons page at <https://quarknet.org/content/w2d2-videoconferences> (scroll down to the table). Please look it over and contact me if you see any errors or oversights or any problems at all.

Here we go – W2D2 is less than 48 hours away!

This and all W2D2 memos will be posted on the website at <http://tiny.cc/w2d2>.

All the best,

Ken
