

The BNL - SB Quarknet Group held their annual workshop at Brookhaven National Laboratory from June 27 & 28, 2024. This year's workshop included eight teachers, four of whom had been in the program before. There were primarily teachers from suburban Long Island schools.

The focus of the workshop was a reintroduction to Quarknet, including World Wide Data Day and the particle physics MasterClass. Ketevi Assamagan spoke about the variety of physics experiments that are ongoing at BNL. Mateus Fernandes Carneiro da Silva arranged tours of the Atlas clean rooms. The group joined LIPTA, the Long Island Physics Teachers Association, for their annual BBQ. At the end of the workshop, teachers prepared and shared implementation plans.
