

2019

QuarkNet annual report
University of New Mexico

Activities of the University of New Mexico QuarkNet Center are shown on our website, <http://physics.unm.edu/QuarkNet@UNM>. In September 2019, we led a tour of the scientific heritage sites of Los Alamos, NM. This tour was announced through a statewide teachers' distribution list and consequently allowed us to broaden our contacts to include faculty at 10 schools. The tour covered sites associated with the Manhattan Project as well as an overview of the campus of present-day LANL. The UNM QuarkNet center also sponsored two lead teachers to attend the Fermilab Data Camp in July 2019: Stephen Kaestner (Jefferson School) and Elaine Stevens (Atrisco Heritage High School). We hope to work further this year with Ms. Stevens, who is the chair of her science department, on ways to bring particle physics into the Albuquerque Public Schools curriculum.
